

The buzzing sound of bugs and [UV bug zapper](#) other insects is enough to drive anyone crazy within the summer season months. And as expected, many homeowners buy [outdoor bug zapper](#) zappers to ward off these annoying and undesirable visitors. However, it's a complete different ball sport for cat mother and father as they principally concern for the security of their pets. It is very relatable to surprise what happens when your curious furry buddy decides to investigate the flashing mild and electrifying sound from the bug zapper. Is a [UV bug zapper](#) zapper harmful sufficient to kill a cat? No, the voltage in electric zappers will not be robust enough to kill a cat. However, it may hurt your cat or trigger more harm than it should in case your cat is standing on a wet surface, so it's best to place the [portable bug zapper](#) zapper in a spot where your cat can't reach to safe its safety. Although cat owners don't really anticipate to ask this sort of query, you may never be too cautious with cats.

(Image: https://images-na.ssl-images-amazon.com/images/I/819PFJ8MlyL._SL1500_.jpg) Now let's intently examine bug zappers and the potential hurt they can cause to cats. You could also be questioning how bug zappers kill mostly flying insects. Well, bug zappers use ultraviolet lights to attract insects over, and once the bug will get close sufficient to the electrical grid, they are instantly killed by electric currents. The light from the bug zappers is designed to look like pure lights or other types of light that curiosity insects sufficient to fly close. When the bug or [UV bug zapper](#) insect has been killed, insect zapper it falls into a collection tray where the stays can easily be thrown out. It is sweet to know that bug zappers also can entice other animals corresponding to bats, birds, and generally out of curiosity, cats; these animals can get caught up in them and get harmed. Although bug zappers can hardly kill cats, there are a number of other harms they may cause to them.

One thing for sure is that if your cat comes involved with a bug zapper when it's energetic, it is going to receive an electrical shock. This is certain, [UV bug zapper](#) especially when it's standing on a wet floor, or its nostril or paws are wet. Also, there is a high likelihood that the dead insect will appeal to your cat and try and eat them. If your cat ultimately eats these insects, the chemical used to deal with the bug zapper, which has contaminated the [bug zapper light](#), could cause digestive issues and even food poisoning. Another potential danger is that cats liable to seizures or rechargeable bug zapper other neurological issues could be triggered by the vibrant lights from bug zappers. 1. Remember to keep bug zapper out of your cat's reach. 2. Before using a bug zapper, read the manufacturer's instructions and warning labels. 3. Supervise your cat anytime the zapper is in use, and your cat hangs around it. 4. Eliminate the insect remains in the collection and [UV bug zapper](#) check out to stop your cat from ingesting them. 5. You should use different alternative strategies to make sure your cat's safety. 5. Seal off entry factors the place bugs come into the house. Direct contact with bug zappers can lead to critical harm to cats, and ingesting insects killed by the bug zapper can cause digestive issues or poisoning. So it is important to take the preventive measures talked about in this article. Better still, you can also use bug zappers alternatives to secure your cat's safety.
