

The main thing you have to identify is that the noise is originating from atmosphere moving together with vents. And then sure that the vents are not broken or partly flat. If they are partially closed then you need to find out if they are exactly closed in error or to balance the equipment. Remember that if you close some for the vents then this air moved by the blower should be forced away from other vents in the equipment. If there is too much air for the remaining vents to handle then they'll become boisterous. Sometimes there just simply is insufficient space for your air to get out because there is a shortage of vents what the community. I have seen many systems which this way because the contractor opted to skimp to cut back costs on installation.
